

GEN 2 System

The GEN 2 from Hoop Tech is the next generation HTP style cap frame. Originally called The Dream Frame, the GEN 2 was redesigned to allow sewing closer to the bill than ever before. And it is the easiest cap frame that we have ever made to frame all styles of caps, even visors!

We have G2 Cap Frames to fit all major machine manufacturers.

Tajima - Melco - Toyota - Barudan Advantage - ZSK - Meistergram - Happy - Highland - SWF - Prodigi - Generations - PR-600 &1000 Series - Baby Lock, Ricoma - Redline and other Tajima style drivers

The GEN 2 works with all types of caps:

Structured - Unstructured - Low Profile - Full Crown - Strap Back - Flex Fit - Fitted - Flat Bill -Pre-curved - New Era - Pacific - Nylon - Military Style. And don't forget VISORS! (With and without sweatbands)

The new "GEN 2" features include:

- A spring steel bill retainer that sets and holds the bill angle.
- Backing clips to hold your stabilizer in place during framing.
- Internal retaining fingers for proper bill alignment.
- Lighter frame design (20% less weight) than the original.
- Redesigned bill retainer with closer access to the bill.
- Open design Top Clamp.
- Large sewing field.

VISORS

Now, finally an easy way to hold and sew visors! Full field sewing access with no bill restriction.

Together with the T-Bar Framing Gage there is no easier way to frame and hold a cap for sewing.

The stitch quality of the "GEN 2" is even better than the original EMS style cap frame and it's easier to frame using the re-designed adjustable T-Bar Framing Gage.

The T-Bar Framing
Gage gives you the
leverage to stretch
the cap fabric down
so that it lays flat
on the gage, then
the GEN 2 clamps
it in place for great
registration.

GEN 2 T-BAR LASERLINE
